Rensselandia collected June 2
from NE cor. SE 1/4 SE 1/4 28-27 N-2E
0.3 miles S on Patowatomie Point Rd
of US 24, and about 100' west
of Pot. Pt. rd., Logansport (7 1/2')
□, Indiana.

June 2

West side frame stone by about center
 NE 1/4 27-27N-2E, Logansport (7 1/2') □
 Stroms topora beds on west side
 quarry 12' unconformable with
 Delifian, showing slight relief (6")
 where contact was seen. Some
 records 5 feet of ss at base but
 not continuous. Limestone light
 gray, without definite bedding.
 Dominated by Stroms, essentially
 a congl. of them. Corals not well
 represented, less than 10% of
 the faunal make up. Stringat
 in patches, mostly on surface
 extend down 18". Stroms worn
 and all out of place and the vast
 majority at an angle or upside
 down. Stroms up to 3 1/2' seen
 upside down. One truncated and
 overlain by Logansport ls.

On south wall of quarry 11' of
 Gray ls is overlain by
 14' of Logansport, strongly
 crinoidal, many brachiopods,
 different corals and Stroms
 especially a broad flat one
 with corrugated base

June 3

Breakfast	3.00
Lunch	1.81
Supper with Phelans	

June 3
Pot. Pt. Road 0.3 S + 100' W of US 24.

String & large clams 9' above Rensselaeria
in Strom. beds. On east side road Rem
bed just above Dil. and section is
7' high. On NW. most a small hill
Logan part appears. Section is only
about 7' here.

South side knob J32

Usual Fry Farm

Coral and Stroms, mostly Stroms
belted belts, many upside down

2 1/2

D

1 1/2'

C

Gray limestone with few Stroms
Corals fairly common

1'

B

yellow patchy dolomite and blue ls.
braconid, Stropholonta

1 1/2'

A

blue limestone with large Pneumatophylax
Strom rare.

Covered

C - Pot road & Fry farm 17-21

BW - " " " " 20-25

C to end France Og - details of top - truncated Strom

BW " " " " " " " " " "

Color 0-3 Pipe Creek Falls

BW 1 " " " at bridge

C 4-7 Georgetown & Little Rock Creek

BW 2-4 " " " " " "

About 3:30 PM went to Pipe
Creek falls - saw gray bed
with characteristic Pneumatopora
but no Stringo or Rensselaeria

13,2X
533

125
1113
1202

Section west side France Bay

10' Stringocephalus in top 1 1/2 feet.
 Crudely bedded to better shelter corals
 and Stroms, the latter predominant
 Megastropia at base = Fry Farm
 5' sandy ls, sand grains frosted
 Corals

Silurian Kobonoo Dal with small
 track, cavities & Halysites

Two patches of Stringo - The
 southernmost one with
 abundant Amplijera, less Strom,
 Northern patch with abundant
 Stroms.

June 4

Breakfast		3.65
Lunch	18.57	1.68
Supper		13.24
Lodging 3 nights		52.02

June 4
Stopped at Huntington loc. 3 mi NE of
Georgetown - Saddle River.

coarse gran
crinoidal

West of bridge about 100-150 yds
downstream

5' B

Thinner bedded fine grained
crinoidal ls. many small fossils

2-2 1/2 A

hard massive fine grained ls
with corals, bryozoa, small brachiopods
occasional strom.

Contact with sil irregular 6" or 9"
relief.

C - forms thin slens on top of B 6" - 1"
but some in field on E side road

This locality is 300 paces west
of the bridge 1750', at a small
natural bridge showing contact
of Silurian and Devonian.

Pottawatomie Road

6 1/2 between Renss. + Clam bed. About
4 1/2' + under Renss. Knob just NW
of Clam Knob is mostly Loganport
on the west half.
